- **Customizable scheduled reports**
- **Real time event monitoring**

Vantage Report
Network Reporting Analyzer

Logging and Reporting Analyzer for ZyWALL Internet Security Appliance

Vantage Report (VRPT) is a reporting system for quickly and conveniently collecting and analyzing a distributed network, provides IT administrator of a simple method of monitoring multiple ZyWALL appliances. IT administrator can easily monitor UTM (AV/AS/IDP), DoS/DDoS attack, bandwidth usage and service usage to enhance control of network security.

Benefits

Web-based centralized reporting system

ZyXEL Vantage Report is a Web-based, centralized reporting system for quick and convenient collection and analysis of distributed networks, providing system administrators a simple and direct method to monitor multiple ZyWALL Internet security and IDP appliances. The intuitive user interface saves administration and installation time, while predefined dashboard and real-time syslog analysis offers administrators a quick view of network health and log analysis of important devices.

Reporting for ZyWALL Unified Threat Management (UTM)

With the Vantage Report, system administrators can easily monitor network access, site-to-site VPN traffic, attack, intrusion, anti-virus, anti-spam and bandwidth usage of network applications. The information helps IT staff to enhance controls over security and bandwidth management through auditing and tuning the configuration of ZyWALL UTM appliances.

Easy traffic analysis

The Vantage Report offers a comprehensive set of real-time and historical reports including firewall attacks, bandwidth usage, Web site usage, VPN site-to-site usage, user activity and more, allowing organizations to response to suspicious activities and to ensure employee productivity. The Vantage Report provides summaries of all network attack types, as well as informative reports on user behavior to identify time-wasting or bandwidth-intensive activities.

Customizable scheduled reports

The Vantage Report supports customized report templates that administrators can easily define multiple report formats and daily or weekly reporting schedules, allowing users to generate customized reports to share with the management team or archive the reports for future use.

Access and navigate your reports anywhere

All reporting functions are performed via the Vantage Report's password-protected Web user interface to facilitate deployment and access from a local or remote system using a standard browser. The intuitive design simplifies access and navigation significantly.

Specifications

System Specifications

Server

• Windows XP Professional

• Windows 2000

• Windows 2003 Server

• Windows Vista (32-bit/64-bit)

• Windows 2008 Server (32-bit/64-bit)

• Windows 7 (32-bit/64-bit)

Client

• Browser support:

  ▪ Internet Explorer 6.0 or later

  ▪ Firefox 1.0.7 or later

  ▪ Mozilla 1.7.12 or later

• Screen resolution: 1024 x 768 or higher

License

• Each USG device provides one free node of vantage reporting software and allows one MyZyXEL.com account activation per customer. With the flexible pay-as-you-grow license upgrade model, users have three kinds of SKUs (5 devices, 25 devices or 100 devices) to purchase more number of their devices for future expansion.
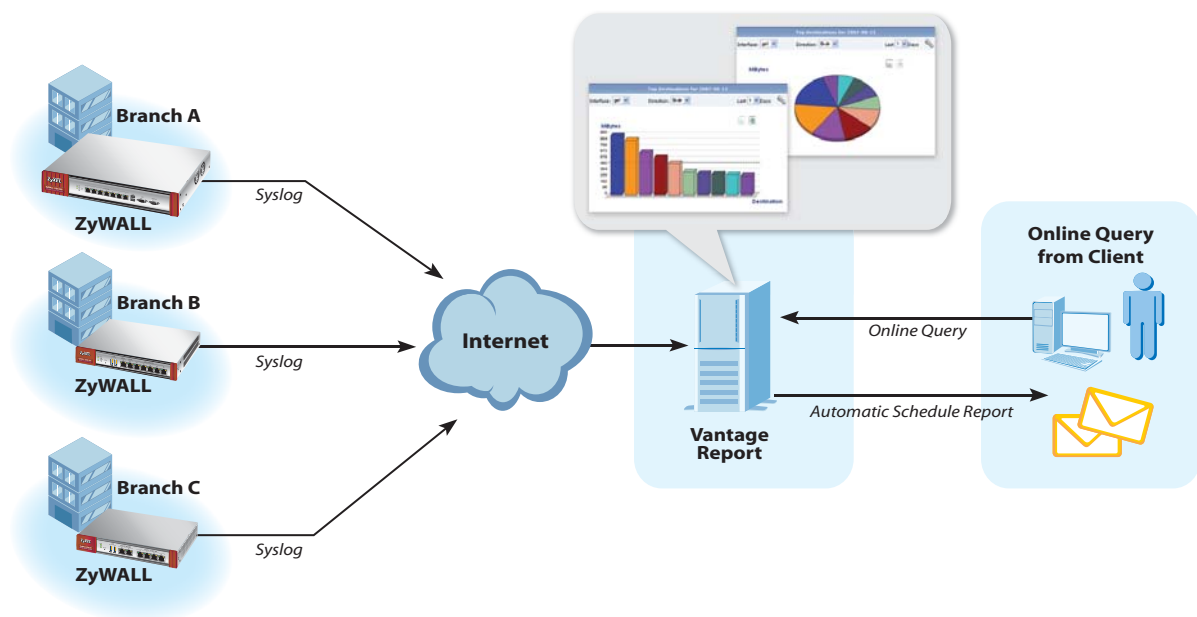

Hardware Specifications

Server

The number of managed devices	CPU SPEC	Memory
1 ~ 5	Intel P4 2.6G or better	512 M
6 ~ 50	Intel P4 2.6G or better	1 G
51 ~ 100	Intel P4 3.2G+ or better	1 G

Client

• CPU: Intel Pentium 4 processor 1 GHz or better

• Memory: 512 MB or better

Application Diagram

1. Login Vantage Report and add device
2. Configure ZyWALL to send syslog to Vantage Report
3. Vantage Report receives syslog data and store in database
4. Vantage Report server generates the report per client's request accordingly
